

# Various Nail Removal Method Key Points

Items to Prepare

Nail Machine / Tweezers / Acetone (100%) / Stainless steel mesh / Aluminum cup

## Important

- ※First, count the quantity of diamonds on nail prior to removing the nail art diamonds.
- ※Use the nail removal machine to file the surface, then quickly penetrate with Clean & Remove liquid.
- ※Do not touch the diamonds directly with the nail removal machine or tweezers. Pay strong attention to this point.

## Tiara

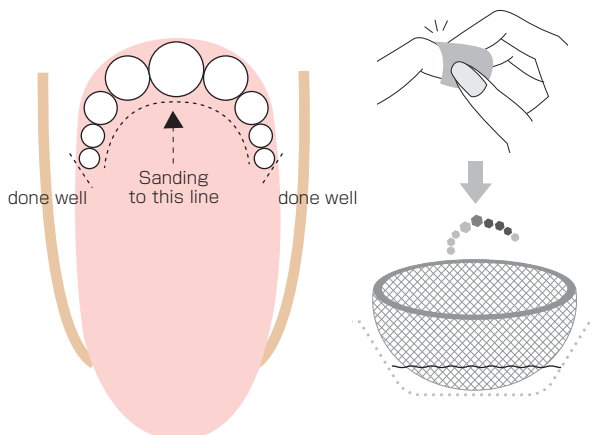

With the 1carat diamond (abbreviated to diamond in the following) Table in front of hand, remove the gel (abbreviated to gel in the following) with the nail machine.

File off completely the two set points on both sides of Tiara.

Soak cotton with 1carat clean & remove liquid, and cut an appropriate size aluminum foil to wrap the nail, wait for approximately 6 minutes.

Use the 1carat cleaning kit; first pour an appropriate amount of clean & remove liquid into the cleaning cup.

Simultaneously, without touching the diamond, insert the tweezers to reach the lower girdle of the diamond. Then, remove the diamond together with the gel and place into the cleaning cup using a mesh.

Try not to let the solvent to vaporize, wrap nail for approximately 5 minutes.

## I - line

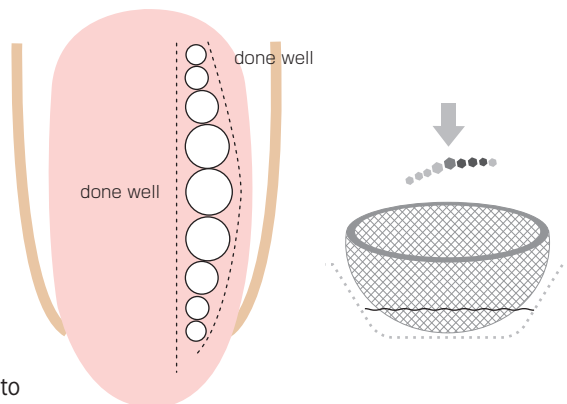

Scrape off areas (both sides of nail bed with the diamonds as the center reference) that are without diamonds.

Scrape off along both sides of I LINE.

Soak cotton with 1carat clean & remove liquid, and cut an appropriate size aluminum foil to wrap the nail, wait for approximately 6 minutes.

Use the cleaning kit; first pour an appropriate amount of clean & remove liquid into the cleaning cup.

Simultaneously, without touching the diamond, insert the tweezers to reach the lower girdle of the diamond. Then, remove the diamond together with the gel and place into the cleaning cup using a mesh.

Try not to let the solvent to vaporize, wrap nail for approximately 5 minutes.

## Motif
